

Practical 11

Aim:

- To compare AI-generated content with student-created content.

Objectives:

- To identify difference in writing
- To understand AI limitations

Procedure:

1. Write paragraph manually – Compose a paragraph yourself using your own ideas, wording, and structure on the selected topic.
2. Generate same topic using AI – Use an AI tool to produce another paragraph on the same topic for comparison.
3. Create comparison table – Organize both paragraphs side-by-side in a table to compare style, clarity, tone, and content differences.

---Output---

Will AI replace jobs or change them?
AI is growing very fast & is affecting many types of jobs. Some people fear that AI will mostly change jobs rather than eliminate them. AI can perform repetitive and time-consuming tasks quickly & accurately, such as data entry or basic analysis. This helps humans focus on creative decision-making, and problem-solving tasks. New jobs like AI trainers, data analyst, & cybersecurity expert are also being created because of AI. However, workers will need to learn new skills to stay relevant in the future. Overall, AI is not a threat if people adapt to it. Instead of replacing humans, AI will work alongside them & improve productivity & efficiency in many fields.

b) AI-Generated Content (Written by ChatGPT)

Artificial Intelligence is more likely to change jobs than replace them entirely. While AI can automate repetitive and time-consuming tasks, it cannot fully replicate human creativity, empathy, and complex decision-making. Many industries will see job roles evolve, with employees focusing on strategic and creative responsibilities while AI handles routine work. At the same time, new jobs related to AI development, maintenance, and ethical oversight will emerge. Workers who adapt by learning new skills and embracing technology will benefit the most. Although some jobs may disappear, AI will also create opportunities for innovation and productivity. Overall, AI will reshape the job market by transforming how work is done rather than completely removing the need for human workers.

Comparison Table.

Human - Generated Content	AI - Generated Content
1) written with personal thinking & opinions	1) written in a neutral formal tone
2) may include simple language & emotion	2) uses polished & professional language
3) Can have minor grammatical mistakes	3) mostly error-free & well structured
(4) Reflect individual understanding	(4) Based on general knowledge and pattern
(5) show originality & personal style	(5) Lack personal experience or feeling
