Practical 10

Aim:

- To analyze AI generated text for plagiarism and bias.

Objectives:

- To detect biased statements

- To improve writing

Procedure:

1. Generate paragraph from AI – Use an AI writing tool to produce a clear, coherent paragraph on your chosen topic.
2.
3. Check plagiarism – Run the paragraph through a plagiarism checker to ensure originality and proper attribution.
4.
5. Check grammar – Review the text with a grammar tool to correct errors in punctuation, spelling, and sentence structure.

6. Identify biased statements – Examine the content for subjective language, assumptions, or one-sided viewpoints.

7. Rewrite neutrally – Revise the paragraph to remove bias, ensuring the tone is balanced, objective, and fact-based.

Goals   92 Overall score

Online learning may seem convenient for college students, but it often fails to create the discipline and accountability needed for real growth. Without a structured environment, many students become inconsistent, distracted, and dependent on recorded lectures they rarely revisit. Offline learning, on the other hand, pushes students to stay engaged through face-to-face interaction, immediate doubt-solving, and a focused classroom atmosphere. It also builds communication skills, confidence, and peer motivation, which online classes cannot match. While online learning is helpful for flexible schedules or self-disciplined learners, offline learning remains the better choice for most college students because it encourages stronger habits and deeper understanding.

In my experience, online classes look easy at first, but they usually make students lazier and less serious about studying. When you're at home, it's easy to get distracted or skip lectures, and most people never actually watch the recordings they depend on. Studying offline feels tougher, but that environment makes you show up, pay attention, and clear your doubts on the spot. Talking to teachers and classmates also builds confidence and keeps you motivated, which is something online learning can't really offer. Online classes are useful when someone needs flexibility, but for most college students, offline learning helps them stay consistent and actually understand what they're studying.

In my experience, online classes look easy at first, but they usually make students lazier and less serious about studying. When you're at home, it's easy to get distracted or skip lectures, and most people never actually watch the recordings they depend on. Studying offline feels tougher, but that environment makes you show up, pay attention, and clear your doubts on the spot. Talking to teachers and classmates also builds confidence and keeps you motivated, which is something online learning can't really offer. Online classes are useful when someone needs flexibility, but for most college students, offline learning helps them stay consistent and actually understand what they're studying.

In my experience with online classes, they seem easy at first but they only make students lazier and less serious about studying. When at home, you may get distracted or skip the lecture, and mostly no one watches the recording they rely on. I find it much harder to study offline, but that setup creates a necessity for you to come, concentrate, and clarify. Chatting with teachers and classmates helps you stay upbeat and motivated, which is something online learning does not offer. Online classes are great when a person isn't able to attend college, but for most college students, in-college classes help them keep up with everything.
