Practical 6

Aim

- To create and modify digital identity using LinkedIn.

Objectives

- To create professional online profile

- To update personal information

Procedure

Create LinkedIn profile
Sign up on LinkedIn using your email and set up a new profile.
This gives you access to professional networking and career-building tools.

Add photo, bio, education
Upload a clear professional photo and write a short bio summarizing who you are.
Enter your educational details to complete your basic profile information.

Add skills
Use the "Skills" section to list your technical and soft skills.
Adding relevant skills increases your visibility and strengthens your profile.

Create a simple post
Click "Start a Post" and write a short, meaningful update or introduction.
Share it publicly to begin engaging with your professional network.
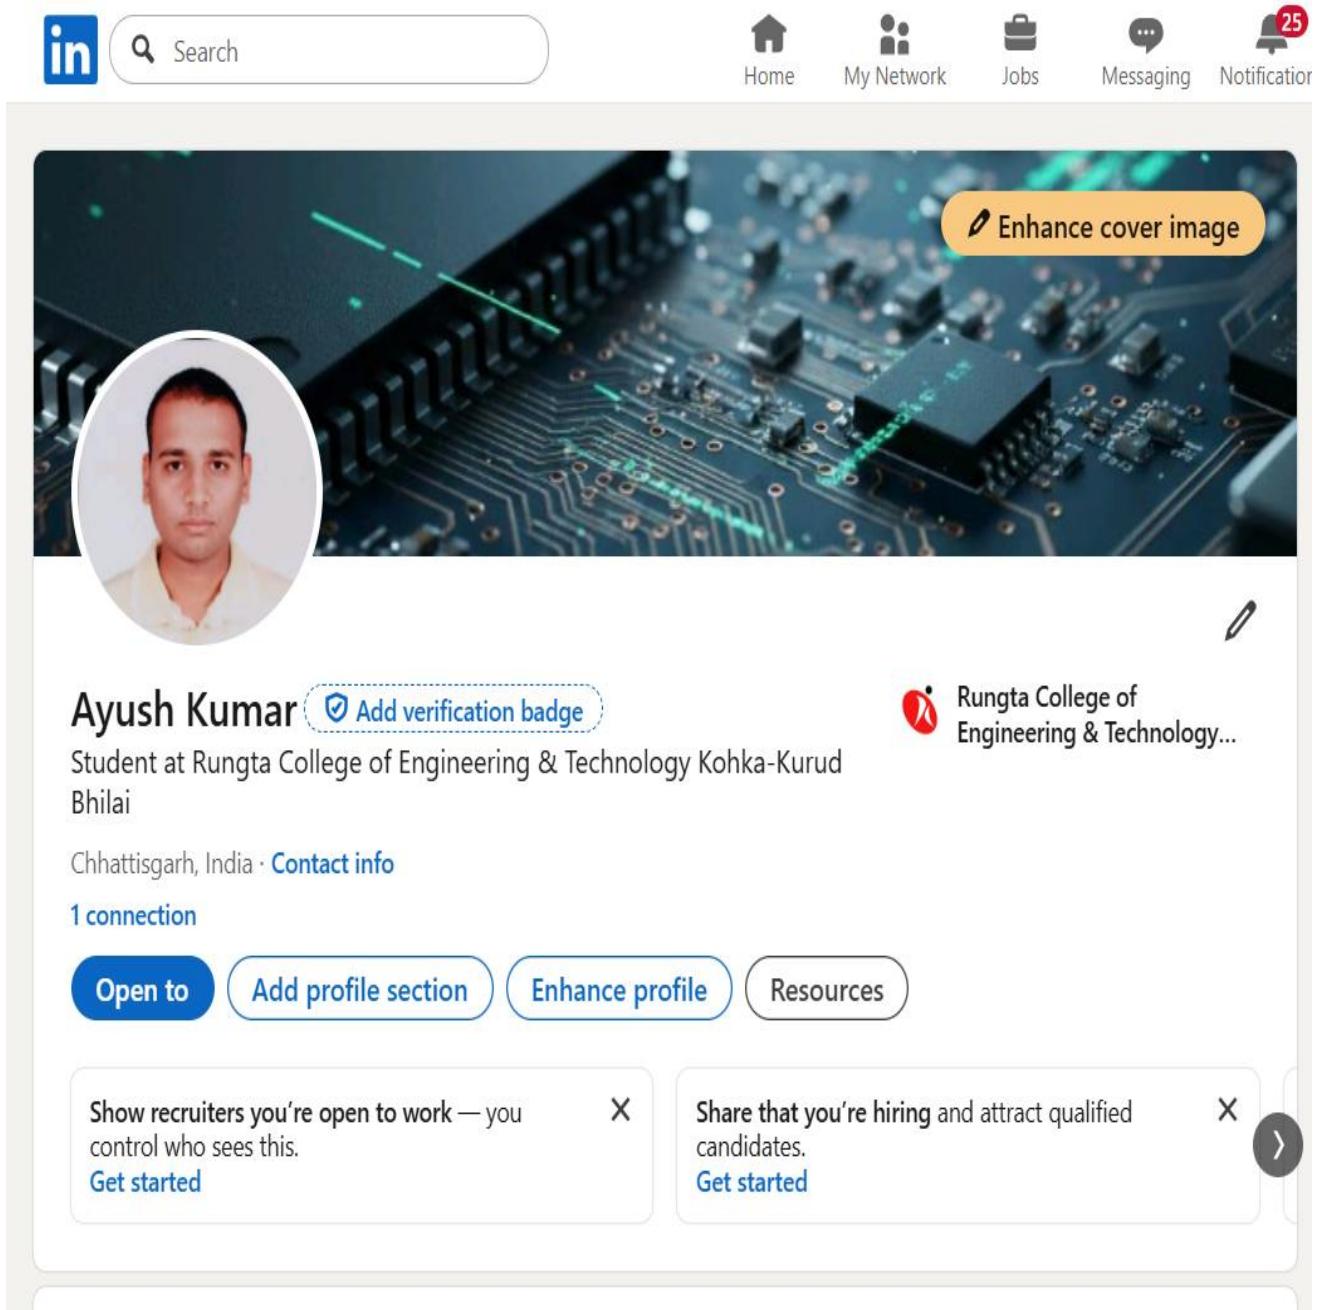

Change privacy settings
Go to **Settings & Privacy** to adjust what others can see on your profile.
Modify visibility, contact preferences, and data-sharing options as needed

Title: My Learning Journey in Digital Literacy

"Over the past few weeks, I have been learning essential digital literacy skills, including safe internet practices, file management, online communication, and the use of productivity tools.

This journey has helped me understand how to build my digital identity, stay secure online, and use technology effectively in academics and daily life.

I look forward to learning more and improving my digital competence."
